

I CLAIM:

1. An engaging structure for runner of an umbrella including the runner
5 being provided with several side apertures for receiving a relating ball,
a sleeve provided around the runner, which includes upper opening
and an inner middle edge having smaller diameter relating to the
opening, and the sleeve having an inner low projective ring, which can
engage with a positioning ring on the runner thereunder, and the
10 runner with the sleeve being provided around shaft having an annular
convex portion for engaging the balls received in apertures of the
runner while being compressed by middle edge of the sleeve to
maintain the umbrella being opened stably.
2. An engaging structure for runner of an umbrella as claimed in claim 1,
15 wherein the shaft is provided with several grooves relating to the balls
for engagement.
3. An engaging structure for runner of an umbrella as claimed in claim 1,
wherein the shaft is provided with two tubes in interval with an
annular convex portion for engaging with the balls.
